The Medicine's Life Cycle

Diagram based on concepts from: The Many Faces of Corruption: Tracking Vulnerabilities at the Sector Level (page 35) and WHO Good Governance for Medicines Programme: an innovative approach to prevent corruption in the pharmaceutical sector (page 5).

Pharmaceutical Systems Strengthening

Supply Chain is Part of PSS

- Pharmaceutical System
 - Pharmaceutical Management System
 - Pharmaceutical Supply System
 - Pharmaceutical Sector
 - Medical Products Building Block (WHO Model)
-

Supply Chain Management ≠ Pharmaceutical Management

- **Supply Chain Management**

- Addresses factors that influence flows of medicines, funds and information for **availability**
- Objectives are to optimize supply and demand visibility, velocity and minimize variability in supply chains.

- **Pharmaceutical Management**

- Addresses factors that influence medicine **availability and accessibility, acceptability, affordability and use.**
- Broad objectives are to ensure access (availability, affordability, accessibility, acceptability and quality), patient safety, and appropriate use.

Pharmaceutical Systems Strengthening

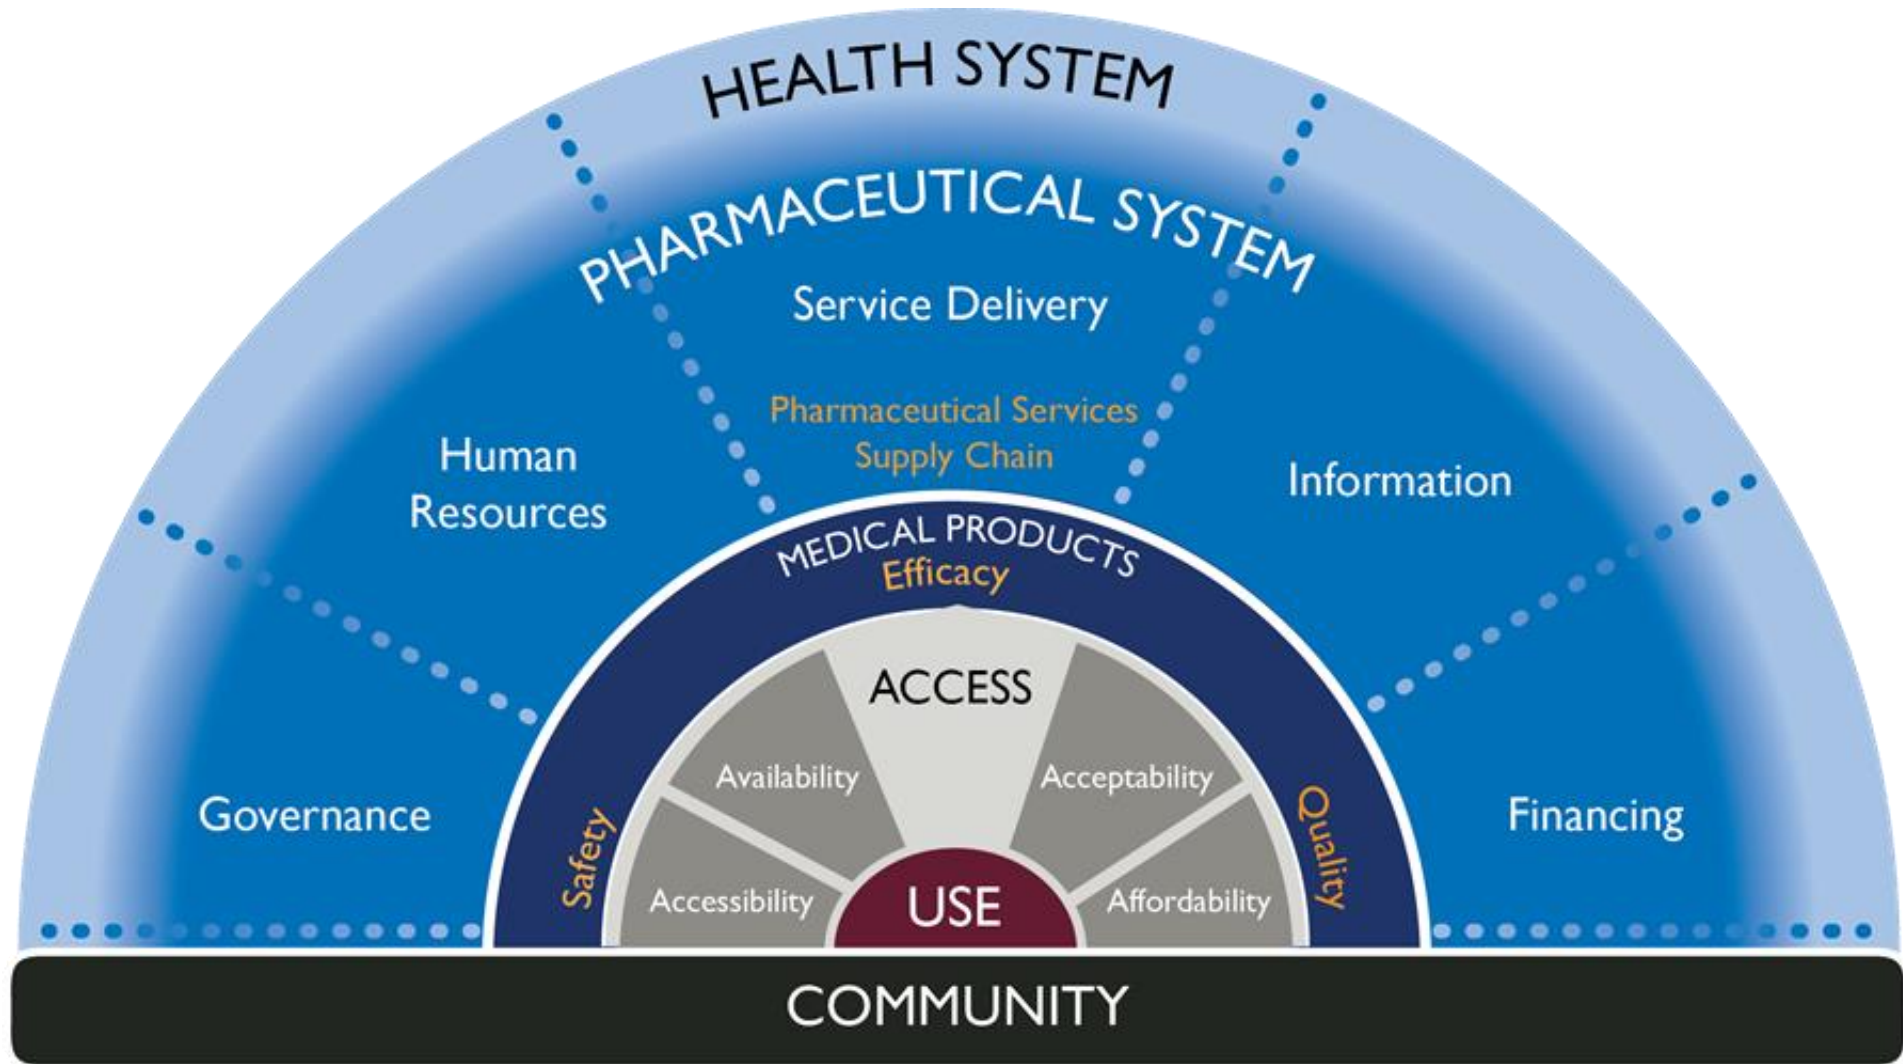

There is an immediate need to shift away from viewing medicines solely as an input commodity, or supply chain management concern, to a more holistic and comprehensive view.

This view should recognize the various structures, processes and their interactions within the broader health system that help ensure access to and appropriate use of medicines and related services.

Source: Hafner, T., Banda, M., Kohler, J. et al. Integrating pharmaceutical systems strengthening in the current global health scenario: three 'uncomfortable truths'. J of Pharm Policy and Pract 13, 38 (2020).

Today's Focus will be on Four PSS Interventions:

*Scan for more
MTaPS resources*

- 1. Regulatory Information Management Systems (RIMS) to support pharmacy regulation (Pharmadex), and pharmacovigilance (PViMS) systems**
- 2. Conflict of Interest (COI) tools to use in PSS**
- 3. 4PL considerations in government supply chains**
- 4. Open access PSS E-Learning Modules**

Questions to consider:

- What are the issues these tools seek to address?
- How can these tools can help?
- How can you use the tools in your context?

USAID MEDICINES, TECHNOLOGIES, AND PHARMACEUTICAL SERVICES (MTaPS) PROGRAM

Improved Access. Improved Services. Better Health Outcomes.

Regulatory Information Management Systems

Tamara Hafner, PhD

Principal Technical Advisor
USAID MTaPS Program

*Scan for more
MTaPS resources*

Why are regulatory information management systems necessary?

- Regulatory systems are a critical component of the broader pharmaceutical system, ensuring the quality, safety, and efficacy of medical products circulating on the market
- Regulatory information management systems are critical for streamlining data collection and analysis and helping countries make evidence-based decisions

MTaPS' approach

- Strengthen human and institutional capacity
- Promote transparency and accountability
- Utilize technology for regulatory compliance and monitoring
- Support interoperability of regulatory data among countries
- Support coordination and advocacy efforts for regional harmonization

Approach and Tools

Pharmadex: a web-based tool that helps streamline and track medicines registration and ensures that products are available and safe

Pharmacovigilance Monitoring System (PViMS): a web-based application to monitor the safety of medicines, including identifying potential adverse events

Digitalization of regulatory information management systems: MTaPS and the USAID-funded Promoting the Quality of Medicines Plus Program jointly developed a guidance document providing a reference pathway for countries to digitalize their regulatory information management systems

Country example: Mozambique

Training on Good Review Practices in Mozambique. Photo credit: Eunice Dias Seni

MTaPS supported the country's national medicines regulatory authority (ANARME) to implement Pharmadex, enhancing it to meet the country's needs

MTaPS supported the use of PViMS so that data entered at the facility level are available at the central level for both monitoring and decision-making

MTaPS supported ANARME to establish an activity surveillance system for the newly introduced medicines in the national HIV and TB programs

Expected outcomes include:

- Improved customer service
- Reduced registration timelines
- Increased availability of data for decision-making

Country example: Nepal

- To support the Department of Drug Administration (DDA) to become a functional authority with an effective regulatory information management system and control of the medical products market, MTaPS:
 - Is helping to customize Pharmadex to increase the Department of Drug Administration's (DDA) efficiency and improve the department's use of data
 - Finalized and implemented the registration module, which is expected to improve the DDA's registration functions

MTaPS resources*

Strengthening governance for more resilient and sustainable health systems

Strong governance can:

- improve medicines **access** and **quality of care**
- increase **sustainable use** of scarce health system resources
- promote and maintain **trust** in health systems

MTaPS' Approach

- Increase transparency and accountability throughout the pharmaceutical system
- Improve and enforce evidence-based medicines policies, laws, regulations, guidelines, norms, and standards
- Increase stakeholder engagement and empowerment, including civil society and consumers
- Work with country stakeholders to identify areas in need of reform in the pharmaceutical sector

Public pharmaceutical decision-making is vulnerable to conflicts of interest (COIs)

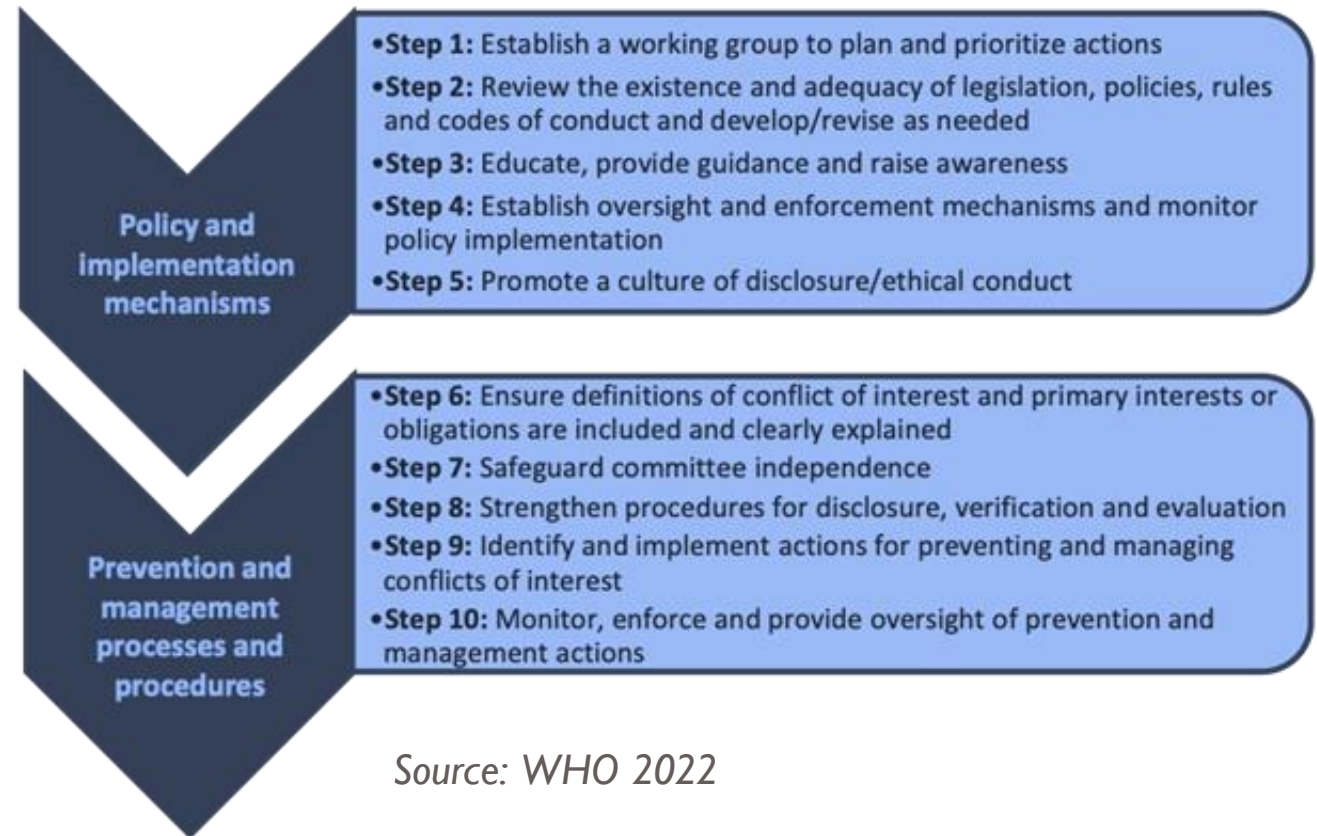

“A conflict of interest results from activities or relationships that compromise an individual’s independent judgment or accountability to a party they are obligated to serve.”

- Rodwin (2017)

- Risk of secondary interests compromising public pharmaceutical decision-making
 - Pharmaceutical systems involve extensive interactions between the private and the public sector
 - Private sector interests seek to influence decisions about reimbursement, procurement, pricing and how health products are used
 - Relationships with the private sector can give rise to COIs
 - Countries that have just a small pool of expertise may have difficulty identifying experts without COIs
- Both COIs and the perception of COIs pose particular challenges

Practical guidance on preventing and managing COIs

- In collaboration with MTaPS, the World Health Organization developed the manual *Managing Conflicts of Interest: A how-to guide for public pharmaceutical sector committees in low- and middle-income countries*
- MTaPS hosted a learning exchange with policymakers, managers, committee conveners, and chairs to reflect on and apply guiding principles and good practices for COI prevention and management

Exploring Opportunities for the Private Sector to Meet Pharmaceutical Supply Chain Needs

Andrew Brown, PhD

Senior Principal Technical Advisor, Governance & Capacity Development
USAID MTaPS Program

Scan for more
MTaPS resources

Why are strong supply chains important in the pharmaceutical sector?

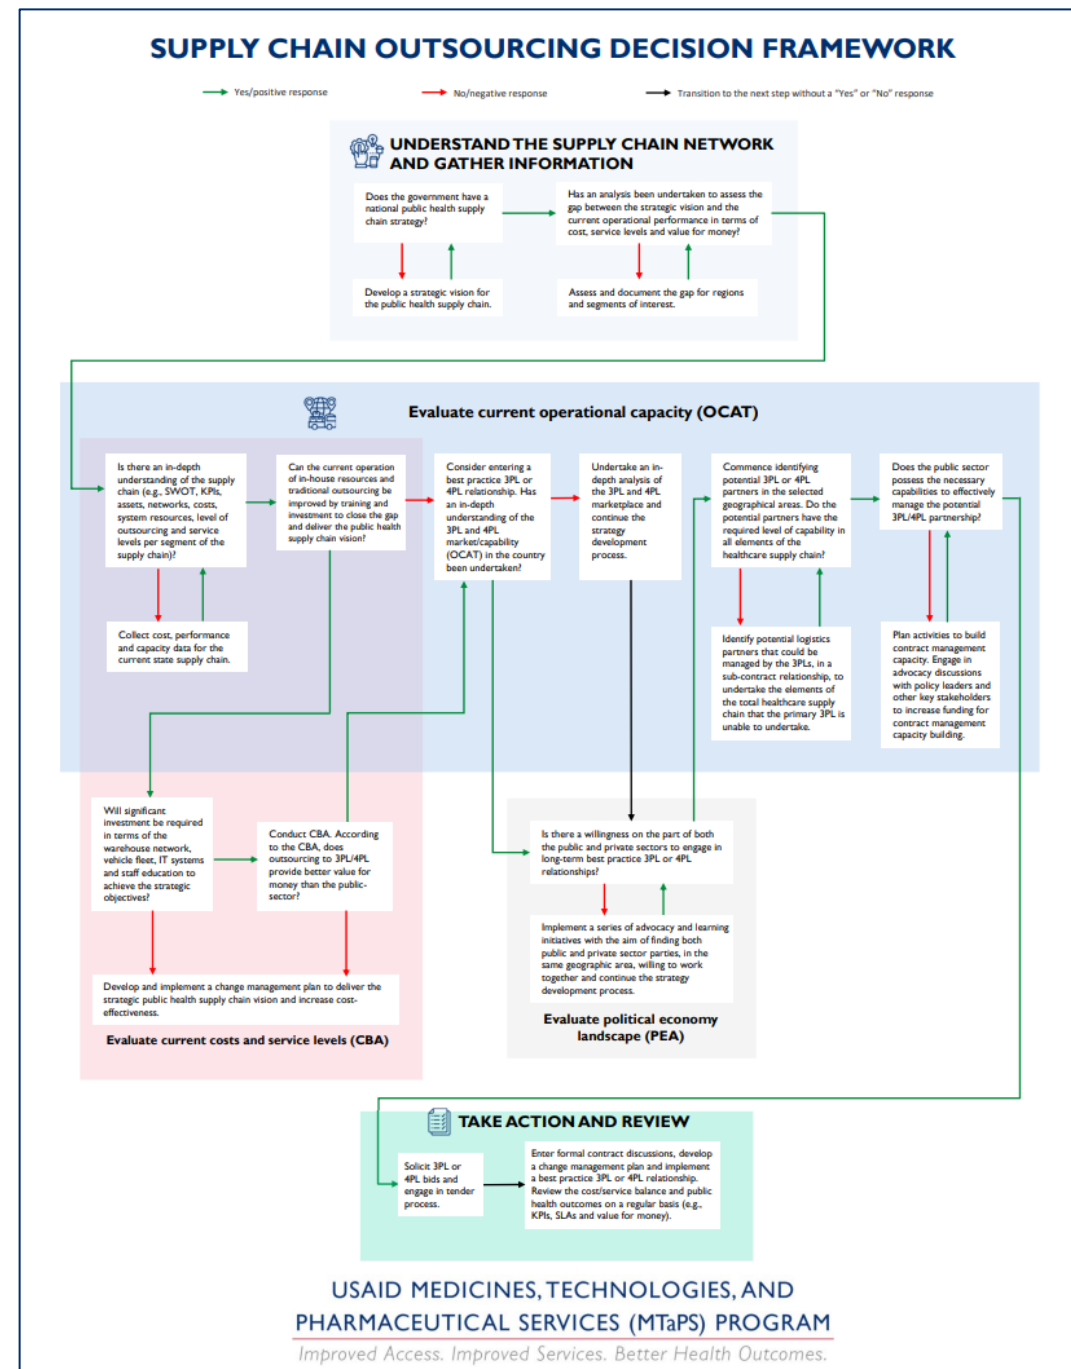

- Ultimate goal of pharmaceutical supply chain systems: uninterrupted availability of quality-assured medicines and health technologies from the manufacturer to end users
- Challenges:
 - Strategies to strengthen key components of the pharmaceutical supply chain are inadequate in many low- and middle-income countries (LMICs)
 - Many systems cannot effectively manage local and global health program demands

MTaPS' approach

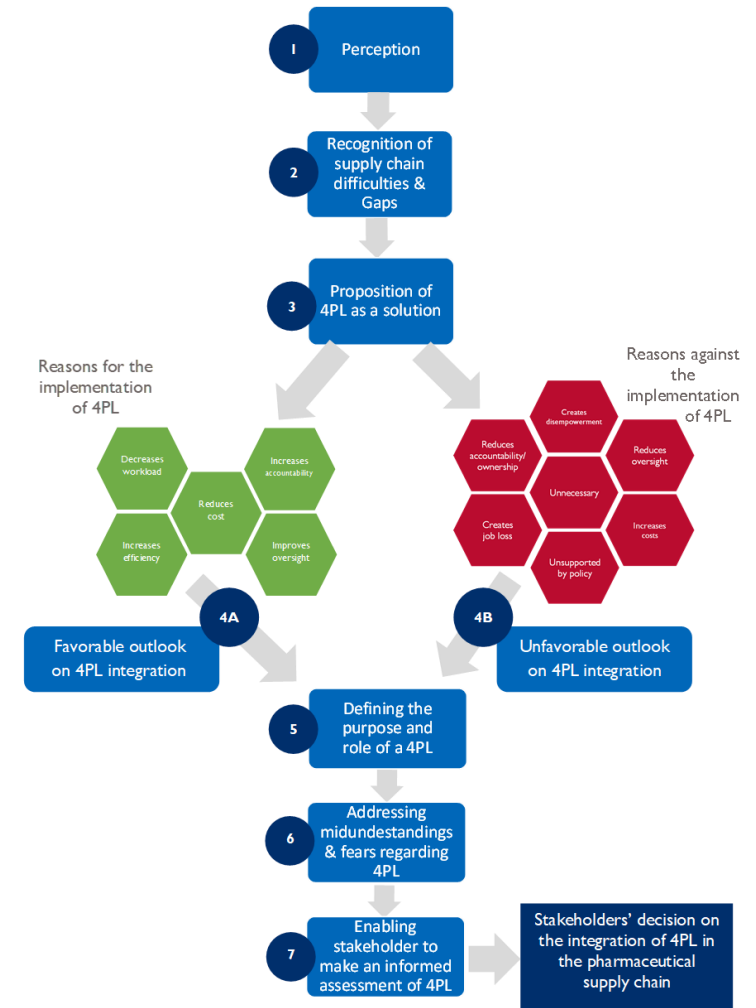

MTaPS uses a wide range of approaches to support the strengthening of pharmaceutical systems, including:

- Assessing supply chain system inefficiencies and provide alternative management practices
- Developing strategies to address root causes and implement risk mitigation through outsourcing to third-party (3PL) and fourth-party (4PL) logistics providers

Tools for exploring private sector engagement

- MTaPS has deployed the following tools:
 - **Cost-benefit analysis** to measure current supply chain spending and service levels
 - **Operational capability audit** to identify gaps in the public sector supply chain and assess the private sector's ability to provide required services
 - **Rapid political economy analysis** to understand major political, economic, social, and cultural incentives, motivations, and constraints that impact the public and private sectors' decision-making
- MTaPS has also developed a **decision framework** that informs decision-making on the adoption of a best practice outsourcing strategy using a systematic approach

Assessing private sector engagement potential

- MTaPS conducted a study in Nigeria and the Philippines using a cost-benefit analysis, operational capability audit, and rapid political economy analysis
 - Results point to both a perceived value and concerns over engaging the private sector in public health supply chains
- Objectives:
 - Assess the potential for implementing best practice 3PL and 4PL service provider relationships not only in Nigeria and the Philippines, but in LMICs in general
 - Assess the motivation, incentives, and constraints to outsourcing
 - Assess the capability of available logistic services providers and their costs and benefits with respect to delivering the services required by public sector health systems
- Analyses were components of the larger decision framework

Capacity development is NOT training

4 PATHWAYS NEEDED TO OPTIMIZE WORKFORCE PERFORMANCE

MTaPS' Approach to E-Learning

- Increasing acceptance and use of digital approaches
 - Need for digital competence (digital competence for health workers)
 - Wider use of technology for e-learning
- Importance of instructional design
- Application of adult learning principles
- Competency-based approach
- Using a variety of interactive methods
- Ensure integration and sustainability for ongoing use

Have you considered 'Curriculum curatorship'?

Use your learning objectives and your assessment but use learning materials that other people have created.

MTaPS has created a range of e-learning courses that you can use...

MTaPS Open Access E-learning Materials

Course Title	Overview of Course	Number of Modules	Link
Pharmaceutical Systems Strengthening (PSS) 101	Overview of PSS, including strengthening quality assurance systems, combating antimicrobial resistance, pharmaceutical sector governance, and logistics for health commodities	10 modules	https://www.globalhealthlearning.org/program/pharmaceutical-systems-strengthening
Good Governance in the Management of Medicines	Importance of good governance in pharmaceutical management, including key interventions to promote good governance and considerations for implementing improvement strategies	8 modules	https://www.globalhealthlearning.org/course/good-governance-management-medicines
Antimicrobial Resistance (Part 1)	Basic principles of antimicrobial resistance, including its impact on individuals and society	3 modules	https://www.globalhealthlearning.org/course/antimicrobial-resistance-part-1-0
Antimicrobial Resistance (Part 2)	Contributing factors to development and spread of antimicrobial resistance, including interventions to address these factors	6 modules	https://www.globalhealthlearning.org/course/antimicrobial-resistance-part-2
Pharmacovigilance	Overview of pharmacovigilance, including quality defects, medication errors, causality assessment, active surveillance methods, risk management, and data management	3 modules	https://elearning.rwandafda.gov.rw:8080/elearning/login/index.php

Why Instructional Design Matters: A Case Study

E-learning materials must be integrated into the learning culture and process of the Ministry of Health for them to be used and maintained.

Learning Management Systems need to be properly supported to be sustainable.

- **Tanzania** – Training of trainers pool, focal point trained, uploaded to Ministry of Health, Learning Management System, continuing professional development accreditation
- **Kenya** – Infection prevention and control training embedded in professional associations
- **Burkina Faso** and **Mali** – E-learning platforms hosted on government websites and trained managers managing
