ELECTRONIC LOGISTICS MANAGEMENT INFORMATION SYSTEM

eLMIS

Background

eLMIS was identified as one of the information systems required for health service providers and insurers, as reflected in the approved version of the universal health coverage implementing rules and regulations (Sec. 36.1 and 36.2). The Philippines Department of Health (DOH), in collaboration with the United States Agency for International Development (USAID)'s Medicines, Technologies, and Pharmaceutical Services (MTaPS) Program is rolling out an eLMIS solution in warehouses and health facilities across the country.

What is eLMIS?

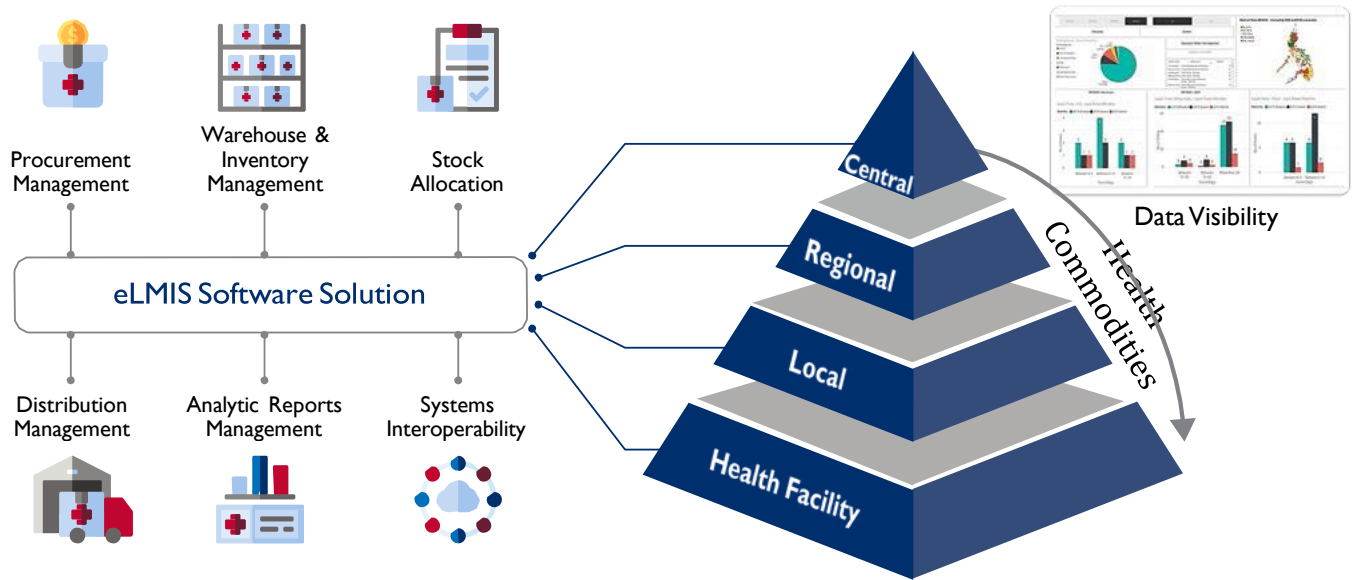

It is an integrated software solution that digitized the DOH health commodity supply chain management functions—such as the procurement, receipt, storage, warehouse operations, inventory management, stock allocation, and distribution—electronically. It is the first of its kind introduced to the DOH.

Goals of eLMIS

To ensure that reliable supply chain data is available, accessible, and visible for evidence-based decision-making and performance monitoring.

To promote efficient supply-chain operations through automation.

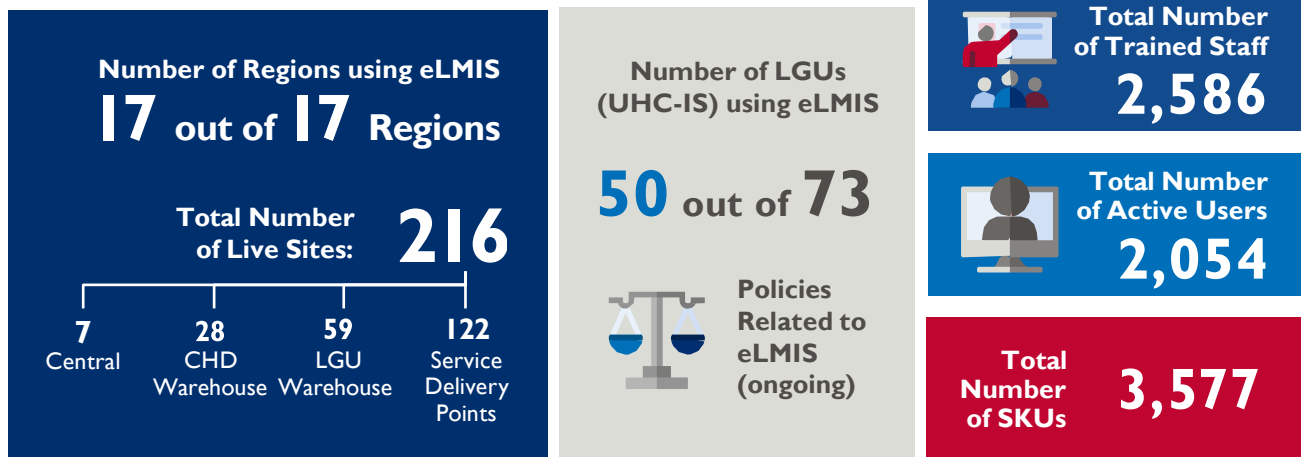

Functionalities of eLMIS

Benefits of eLMIS

- It provides an **efficient** way of collecting, organizing, and reporting supply chain data for decision making
- Enhances availability and **access to real-time** supply chain data through secured web application
- Standardizes **consistent inventory management practices** at all levels of the supply chain
- Ensures **integrity** and **accessibility** of supply chain data through cloud-based system.
- Enables DOH managers and operators to **retrieve stock data anytime, anywhere** through a secured web.
- Enhances supply chain visibility
- **Modernizes** supply chain operations through automation

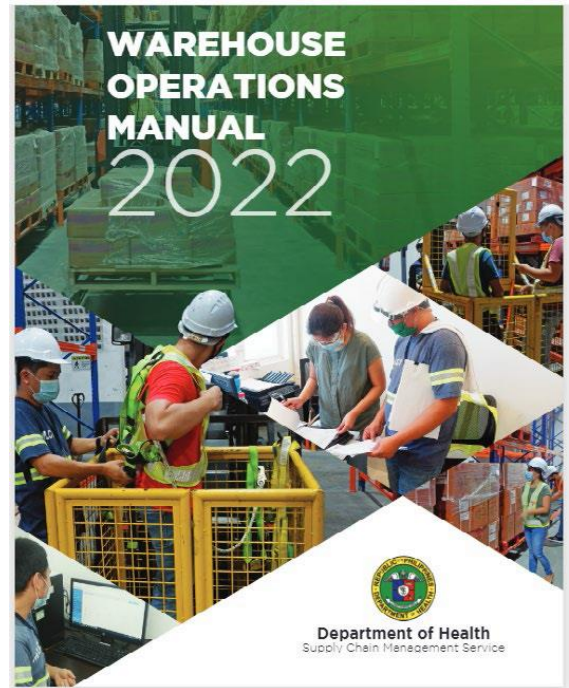

Status of eLMIS implementation (as of December 2023)

How do you support to sustain the gains from eLMIS?

- Institutionalize the use of eLMIS to integrate and streamline logistics information and operations of all public health commodities
- Establish local governance structure, ensuring all stakeholders are well coordinated and involved
- Allocate sufficient funds for eLMIS in the annual investment plans for health at the national, regional, and local levels
- Assign dedicated personnel and provide continuous development support
- Maximize and use the data generated from the eLMIS in making decisions
- Expand leveraging support from the private sector
